

# Motor protection circuit breakers

Motor protection circuit breakers are used for start-up and protection of electric motors (industry, small machines, external use, agricultural machines, compressors, repair shops, etc.).

Motor protection circuit breakers are a special type of circuit breakers designed for protection of wide range of single-phase and three-phase AC motors against overload and short circuit.

**For motor protection:**

- All kind of AC induction motors
- For three-phase motors up to 22 kW

**Protection of other loads:**

- Various low-inductive loads
- Version for single-phase consumers
- Version for transformer protection
- Version for short-circuit protection

**Other benefits:**

- Wide range accessories
- Mounting on 35 mm rail
- Horizontal or vertical operating position
